

Assumptions Assignment 1B

- All phone numbers are exactly 10 numbers long
- In normalisation Provider vet name is split into given and family names based on initial communication in A1A
- Vets and owners may not have a given name or may decide not to provide their family name. Hence all given and family name attributes are optional.
- For foreign keys for head vet ID in CLINIC and home clinic ID in VET, the attribute names are not changed to make queries easier later. That is, vet_id and clinic_id are used respectively.
- In normalisation we assume that a training course with a given title can change duration over time and therefore doesn't introduce a transitive dependency in the 2NF of TRAINING
- Notes regarding any visits to the clinic depend on the condition of the pet itself, therefore making it optional.
